

Executive Summary

This report highlights the revenue cycle management market, which is growing at a 11.4% CAGR and is expected to reach USD 171.97 billion by 2034 (Towards Healthcare, 2025). This growth has been driven by the adoption of AI technologies in industry. The analysis compares three emerging firms across adoption, scalability, technologies, business models, and product differentiation to provide a final recommendation. Key industry metrics, such as clean claim rate, first-pass accuracy, and claims processed, are analyzed to create an objective assessment of each firm.

The report concludes with a clearly defined path for Tiger Global Management to enter the AI-driven RCM fintech space and should pursue a \$10-15 million investment in Adonis. RapidClaims boasts 99% claim accuracy and 5x YoY growth but lacks widespread adoption. They are a riskier, but well-suited investment option as well. Collectly improves payment collection by 70% and reduces average collection days to 12.6 but has been slow to grow. Adonis has proven market fit, processing over USD 13.3 billion in claims and achieving 2x YoY revenue growth (Caroline Boyland, 2025). They operate with 20,000 healthcare providers and have recently attracted institutional capital from Point72, a tier 1 institutional investor, during a Series B funding round (Villamor, 2024).

Incumbent Investment Fund Profile and Pain Point

Tiger Global Management is a large and prominent investment fund that primarily invests in the technology sector (Pitchbook, 2025e). Tiger has focused lately on investing in AI infrastructure, enterprise software, and selective healthcare/digital therapeutics (Value Sense, 2025). Their focus on AI in healthcare is highlighted by recent investments in Viz.AI, Hinge Health, and Komodo Health (Pitchbook, 2025e). They currently do not have any investments in RCM fintechs in their portfolio, even though they have a strategic focus on technology and healthcare (Pitchbook, 2025e). AI is revolutionizing the RCM fintech market, with new solutions launched monthly to address the significant revenue leakage in healthcare. This provides a prime opportunity for Tiger to enter a rapidly growing industry with an 11.4% CAGR (Towards Healthcare, 2025).

Market Opportunity & Dynamics

Denial and Revenue Leakage Crisis

The US healthcare system is an interwoven web of over 200,000 unique healthcare providers and over 900 payers, each with their own unique billing rules (Popover et al., 2025) (Performance, 2025). Revenue leakage riddles the US healthcare industry, costing an estimated \$935 billion, accounting for nearly 25% of US healthcare expenditure (Figure 1) (Shrank et al., 2019). Complex billing requirements lead to data inaccuracies, with data entry errors accounting for 50% of denials (Steinzor et al., 2025).

Figure 1: Sources of Revenue Leakage in USD Billion (Shrank et al., 2019)

Administrative complexity is the most significant issue, accounting for \$265.60 billion, of which 92% is attributable to denial costs (Shrank et al., 2019). Providers face an average insurance denial rate of 17.3% for care already rendered, resulting in significant losses (Hoagland et al., 2024). Providers must bear a \$5 million annual loss due to claim denials, accounting for 5% of net patient revenue (marknteladvisors, 2025). Hospitals spent \$19.7 billion in 2022 attempting to overturn denied claims (Businesswire, 2025). Academic literature indicates that over \$286 billion can be addressed through technology and internal system changes (Shrank et al., 2019).

Revenue Cycle Management and Fintech's

The RCM system optimizes financial operations across ten steps of the medical billing process (Figure 2) (Steinzor et al., 2025). Existing RCM systems segment the medical billing process,

performing each step separately, which creates significant delays between service delivery and eventual payment collection, with the industry average at 20-30 days (MD Clarity, 2025).

Figure 2: Medical Billing Process in the United States (RCM Matter, 2025)

RCM Fintechs have aimed to break down the step-based billing methodology shown in Figure 2 and instead create a unified platform ecosystem that connects care providers, payers, and billing intermediaries, reducing the time delays. Current RCM solutions combine these steps into three distinct phases: Front-end, Mid-cycle, and Back-end. Many emerging fintech solutions are

powered by AI, enabling real-time workflows (Vantage Market Research, 2025). The core objective is to boost cash flows by reducing or preventing denials.

Market Size & Growth

The US healthcare RCM market is rapidly expanding, with the market currently valued at \$58.56 billion in 2024 and expected to grow to \$65.38 billion in 2025, representing a 11.4% CAGR (Towards Healthcare, 2025). The US RCM market is expected to triple to \$171.97 billion by 2034 (Towards Healthcare, 2025). A wave of Artificial Intelligence technologies is driving the market, with AI-powered RCMs reducing claim denials by up to 70% (James Manyika and Kevin Sneader, 2018). AI-powered RCMs could eliminate \$200–360 billion from US healthcare spending (Sanjiv Baxi et al., 2023).

Legacy RCM Market Leaders

Waystar, R1 RCM, and Optum currently dominate the RCM market. Waystar offers an end-to-end cloud-based platform that encompasses the entire RCM cycle (Waystar, 2025). R1 RCM offers a service-based RCM; they take over and manage a hospital's RCM function (R1 RCM, 2025). Optum, a subsidiary of UnitedHealth, the US's largest insurance provider, offers a comprehensive RCM system that vertically integrates with UnitedHealth's network (Wolff, 2021). All three large firms have been rapidly expanding AI strategies, with Waystar, R1 RCM, and Optum launching platforms with deep AI integration (Optum, 2025; Waystar, 2025; Businesswire, 2025a).

The Emerging Fintech Challengers

Collectly

Technology

Collectly is an AI-powered financial engagement platform that automates the financial billing lifecycle across pre-service, mid-cycle, and post-service (Collectly, 2025b). The platform automates eligibility, patient intake, payment collection, and offers flexible payment options (Collectly, 2025b). Their proprietary Billie AI, a voice agent, helps resolve billing inquiries with patients (Collectly, 2025b). Their technology is patient-oriented; it reduces information asymmetries and ensures they pay on time (Collectly, 2025d).

Business Model

Collectly operates a SaaS-based model that charges a fixed subscription fee and a variable, transaction-dependent fee that scales with utilization (Elion, 2025). They target medical groups, hospitals, and billing companies (Collectly, 2025d). Providers benefit from automated patient financial workflows, reduced administrative costs, and increased patient revenue (Collectly, 2025a). They aim to improve patient payment collection by offering payment plans and proactively pursuing delinquent accounts.

Growth Traction

Collectly, raised \$29 million in a Series A led by Sapphire Ventures in 2023, at a post-money valuation of \$160 million (Pitchbook, 2025c). Intended to boost product innovation, scale the adoption of their solution, and expand their team to support their growth (Pitchbook, 2025c).

Founded in 2017, their growth has been gradual; they reached 3x YoY revenue growth as of 2023 (Collectly, 2025c). They also engage with over 300,000 patients daily across their network of 3,000+ providers (Collectly, 2025c).

Competitive Advantage

Collectly's competitive advantage lies in its end-to-end AI-powered platform, which integrates with 20 EHR systems and provides real-time data (Collectly, 2025e). Their technology reduces days sales outstanding to twelve days, far below the industry average of 20-30 days (Collectly, 2025e). Furthermore, their platform is highly customizable, allowing providers to pick and choose pieces that best suit their needs.

Adonis

Technology

Adonis's AI-powered platform provides revenue intelligence and automates RCM middle- and back-end tasks, tracking event-cycle data and optimizing claim submissions (Adonis, 2025a). Their platform consists of three primary modules: Adonis Intelligence, which scans for denials, Adonis Billing, which checks for eligibility verification, and Adonis AI agents, which independently adjust RCM workflows (Adonis, 2025b).

Business Model

Adonis operates a SaaS-based platform, charging providers based on platform usage (One, 2025). Their primary target market is physician groups, health systems, and specialty providers (Adonis, 2024a). Providers benefit from reduced denial rates and boosted clean claim rates (Caroline

Boyland, 2025). Their value to providers lies in issuing real-time alerts to issues and automating billing issue resolution (Caroline Boyland, 2025).

Growth

In their Series B led by Point 72, Adonis raised \$31 million at a post-money valuation of \$155 million (Pitchbook, 2025b). The funding will be used to grow their team, develop advanced AI agents, and expand the platform's capabilities to handle larger health systems (Pitchbook, 2025b). In 2024, they experienced 2x revenue growth, driven by their processing of \$13.3 billion in charges and over 100 million claims (Caroline Boyland, 2025).

Competitive Advantage

Adonis's competitive advantage lies in its intelligence analytics engine reduces denial rates by up to 50% by recognizing denial patterns and adjusting future submissions accordingly (Adonis, 2025c). Their engine has a 98% clean claim rate and a 95% first-pass acceptance rate (Adonis, 2025c). Their platform currently integrates with 35+ EHR systems and is deployed in 20000 providers (Adonis, 2024b).

RapidClaim

Technology

RapidClaim's technology utilizes an advanced multi-model AI engine to generate proprietary AI models purpose-built for healthcare RCM (AI For Healthcare, 2023). Their core products are Rapid Code, automatic medical coding; RapidCDI, improved clinical documentation accuracy; and RapidScrub, claim issues resolution before submission (Rapidclaims, 2025). The RapidClaims

technology package aims to reduce claim errors and the claim denial rate by resolving issues before submission.

Business Model

RapidClaims operates a SaaS based subscription system which scales with client utilization (AI For Helathcare, 2023). They currently target medium to large providers, with the platform being highly scalable depending on provider needs (AI For Helathcare, 2023). Their core business proposition is to reduce administrative costs and increase claim success rates, thereby increasing revenue capture.

Growth

RapidClaim raised \$8 million in a Series A round led by Accel in 2025 (Pitchbook, 2025d). The additional funding will go to team expansion, expanding the product offering for claim processing, scaling sales, and enhancing the technology stack (Pitchbook, 2025d). They are expected to grow revenues at 5x YoY in 2025 (AI For Helathcare, 2023). They currently operate at 25 care providers across the US and integrate with over 15 EHR systems (Jayati Dubey, 2025).

Competitive Advantage

Their package adapts to complex payer-specific rules in real time and resolves human medical coders' errors with AI agents, providing a significant competitive advantage (Singh, 2025). Their AI engine can generate a unique model tailored to the provider's system, enabling deeper integration, with 20 of their 25 customers' systems working completely autonomously (Jayati Dubey, 2025). The model boasts a 98% clean claim rate and a productivity boost rate of 170% (Rapidclaims, 2025). Their platform improves coding accuracy by 96% (Rapidclaims, 2025).

Competitor Comparison

Figure 3: RCM Cycle Service Overlap of Firms

Each firm's services cover different portions of the RCM cycle, with their solutions varying in coverage and type (Figure 3). High Clean-claim rates and first-pass acceptance rates drive the value propositions of Adonis and RapidClaims, highlighting faster payments and improved cash flow. Clean-claim rate measures the proportion of claims that pass through internally without edits, highlighting the reduction in labor required to adjust them (Rapidclaims, 2025). The first-pass acceptance rate is the rate at which payers approve claims on the first submission (Global Healthcare, 2025). Collection rate reflects the increase in payments collected from payers, including patients and insurance.

Metric	Collectly	Adonis	RapidClaims
Company Founding	2017	2022	2023
Funding Stage	Series-A (\$29M)	Series-B (\$31M)	Series-A (\$8M total)
Business Model	SaaS subscription: hybrid flat + transaction-based	SaaS subscription: usage-based and fixed fee	SaaS subscription: scales with utilization
Technology	End-to-end AI patient financial platform with EHR integrations & Billie agent	Revenue intelligence & automation, three-module platform	AI suite: RapidCode, RapidCDI, RapidScrub
Key Differentiator	85% AI inquiry resolution; 75% collection uplift	Pattern recognition across event cycle; 50% denial reduction	Specialized autonomous AI coding
Clean Claim Rate/ Denial Reduce Rate	Not Relevant	97-98% Clean Claim Rate	99% Clean Claim Rate
First-Pass Accuracy/Acceptance Rate	Not Relevant	95%	96%
Collection Rate	75% increase	11% increase	5% increase
Average Collection Days	12.6 Days	Significant (Not Specified)	30% Reduction in Collection Days
Revenue Growth	3x YoY (2023)	2x YoY (2024)	5x YoY (2025)
Platform Usage (Claims/Patients)	300k+ patients daily use service	100M+ claims annually	Millions annually (Not specified)
Healthcare Providers Served	3,000+	10000-20000	25
EHR System Integrations	20+	35+	15+
Target Market	Medium to Large Providers	Medium to Large Providers	Medium to large providers
Key Investor	Sapphire Ventures	Point72 Private Investments	Accel

Figure 4: Key KPI's (Adonis, 2024b; Singh, 2025; Adonis, 2025b; Adonis, 2025c; Rapidclaims, 2025; Rapidclaims, 2025; Pitchbook, 2025d; Pitchbook, 2025b; Pitchbook, 2025c; Collectly, 2025c; Collectly, 2025e; Elion, 2025; Collectly, 2025d)

Based on key KPIs, Adonis has the highest adoption and best integration in the RCM space, serving 20000 providers and integrating with 35 EHRs (Figure 4). Interestingly, Collectly is the oldest of the three, highlighting its slow progress compared to its peers (Figure 4). RapidClaims is experiencing the most significant growth, followed by Collectly, although this figure is outdated (Figure 4). RapidClaims boasts higher clean claim and first-pass accuracy rates, highlighting its greater efficiency in getting claims accepted by payers. Collectly boasts the highest collection rate at 75%, but this may be skewed because they collect from patients rather than insurance companies (Figure 4).

Strategic Fit and Value Proposition for the Fund

Tiger Global Management (TGM) has a long history of investing in technology firms; hence, all three of these firms fall squarely within its target demographic. These firms each have unique innovations to solve the ever-growing issue of revenue leakage in the healthcare space. TGM's current strategy emphasizes high-growth tech and fintech, and all three of these firms tick the boxes (Tiger Global Management, 2025).

Looking within TGM's existing portfolio, all three firms would have possible cross-portfolio synergies. Komodo Health aligns well with Adonis; it can feed more accurate analytics into Adonis's AI engine (Pitchbook, 2025e). RapidClaims could align well with Viz.AI, as its platform improves clinical documentation quality, thereby directly enhancing RapidClaims' software accuracy (Pitchbook, 2025e). Collectly is harder to fit into TGM's portfolio, as it is B2C-focused, while most of TGM's portfolio companies are B2B (Pitchbook, 2025e).

Key Risks and Mitigations

Retaliation & Market Consolidation

Optum, Waystar, and R1RCM dominate the market with significant customer lock-in and data advantages. This impacts each of the three firms differently, with none having deep competitive moats. Adonis is the most exposed, since a firm like Optum could bundle Adonis's technology into its suite and cut Adonis out. Adonis needs to pursue deeper integration with providers. RapidClaims is vulnerable to attempts to replicate its technology; however, this can be mitigated by boosting talent retention. Collectly has the lowest risk because it is not directly competing; however, existing firms could implement patient-facing products. This can be mitigated by Collectly shifting their target market towards smaller providers.

Regulation & Payer Rules

RapidClaims faces regulatory uncertainty, as autonomous medical coding falls into a gray area, with human supervision currently required (CMS, 2025). Engagement with medical regulators and physicians will be needed to ensure the AI is accurate. Adonis is exposed if their AI alters claims to boost acceptance in unethical ways, such as exaggeration. Adonis will require an audit trail to monitor if its AI issues an incorrect recommendation. Collectly is the least exposed, as patient financial engagement is well-regulated, but they must ensure they build in opt-out mechanisms to prevent harassment.

Scaling Failures

Each of the firms will face significant challenges scaling their customer base and economic viability. RapidClaims' growth and effectiveness numbers are based on a small data set. At scale,

the viability of their technology could be lower, exposing the fund to risks associated with failure to scale. TGM's investment should be made in segments tied to key milestones for customer acquisition and EHR integration. Furthermore, before investment discussions with product customers, retention metrics need to be reviewed to verify the business's viability.

Investment Recommendation

This proposal has highlighted the growing opportunity in the RCM fintech market, highlighting three emerging solutions. After detailed analysis, Adonis is the optimal investment opportunity for TGM because it complements their existing investments in healthcare therapeutics and Fintech, offering a new opportunity in industries they already have experience (Pitchbook, 2025e). RapidClaims is an emerging competitor, but it is still relatively small and lags in adoption; it should be considered a riskier play, hence TGM can either invest now or keep it on its radar to enter later.

Investment Rationale

Based on comparable deals in the fintech RCM market, TGM's board should consider a \$10-15 million investment in Adonis (Pitchbook, 2025a). The investment should be contingent on Adonis hitting EHR integration targets and expansion into new provider groups. Furthermore, Adonis should maintain KPIs such as clean claim rate and first-pass accuracy during its expansion. TGM should continue to monitor all three firms and make a final investment decision based on the offer that provides the most lucrative entry point.

Investment Timeline

If TGM pursues an investment in Adonis, the board's first step will be to authorize technical due diligence to verify all claims made by Adonis. Contact existing customers to confirm their

customer base and check their data for accuracy. The second step will be to structure a deal and agree to a term sheet. Ensuring that key covenants require Adonis to meet the KPIs. The final step will be to integrate Adonis into TGM's existing portfolio, providing the opportunity to interact with portfolio companies.
