Intern @Oceanic Investment
Management Hedge Fund

OUR INVESTMENT PHILOSOPHY

We believe blockchain technologies will enable significant improvements across Finance, powering a wave of FinTech innovations. Our advantage is proximity: we have spent the last 6 years building, advising, and investing in the blockchain industry.

Although the market is complex, the missions are straightforward:

1. **Make finance more efficient**, thanks to “back-end” like improvements brought by smart contracts, standardization, and stablecoins.
2. **Open new markets** for alternative asset classes that have been reserved until now for private, advanced investors.
3. **Accelerate innovation** in Finance, an industry usually constrained by regulation and high barriers to entry.

Reshape the financial stack and unlock new economic activities.

TARGET MARKET

Exchanges & Prediction Markets

Deeper liquidity, transparent risk, and real-time settlement. Outperform traditional markets in speed, cost, and market microstructure to become liquidity hubs.

Tokenization & Alternative Assets

Markets and distribution for new asset classes: IP, tokenized funds, private credit, debt, and new forms of digital collateral.

Stablecoins & Payments

Compliant, composable, high-velocity rails that compress settlement cycles and enable global liquidity flows.

Geographic Focus: Europe

Investment Experience

Initiativ - 10M post-money valuation

Building the best exchange for pollution allowances, replacing fragmented carbon markets, and giving corporates, utilities, and traders a transparent & efficient venue to price and trade emissions.

Orda - 7M post-money valuation

Orda is an FX and payments orchestrator that connects fintechs and SMEs to multiple banking and payment rails through a single API, optimising cross-border routes for cost, speed, and reliability.

Silhouette - 20M post-money valuation

Building on-chain dark pools, using zkP and privacy-enhancing technologies to reduce intermediary risk and information leakage while giving institutional traders deeper liquidity and more secure execution.

Bolero - 20M post-money valuation

A platform that turns music IP into investable, on-chain assets, giving creators new financing options and giving investors access to verifiable royalty flows

Investment Memo 1

Terms: 36 months vesting (TBC - will have confirmation once discussion is locked with the lead). Token valuation is capped at 140M.
Tier 1 lead (TBA) negotiating to lower valuation.

Round is oversubscribed (in soft commits) - cap table selected by end of march. Funds to be sent by the end of april. We'll have to prove our worth but that should be fine as we met them IRL and the vibe was great.

Safe + Token Warrant means that we invest in equity, and will get a token at a defined valuation (\$140M).

Company is based in Switzerland and has offices in Madrid.

Company Overview

Giza is creating the whole stack to enable on-chain zero-knowledge machine learning (zkML). They'll have different layers of products, knowing that the current strongest product market fit on-chain is with DeFi. Hence, one of their first products will enable the easy integration of on-chain Machine Learning directly within smart contracts. Giza is working hard on creating standardized and efficient on-chain datasets, helping builders use on-chain data that were so far unstructured and raw. Giza has a great potential product market fit, with many use cases for both Web3 and more "traditional" industries.

Products

Giza datasets

Giza Datasets facilitates blockchain data access for machine learning (ML) within Web3, offering open-source datasets to address data accessibility and quality challenges. This initiative enables straightforward training, evaluation, and deployment of ML models on the blockchain, aiming to streamline ML integration into Web3 for a broader user base.

The project plans to expand its dataset offerings based on community feedback, ensuring relevant and quality data supports blockchain ML development. Giza Datasets leverages the Polars library for efficient data management, simplifying the process of utilizing blockchain data for ML purposes.

Actions SDK

The Actions SDK is a core element in Giza's stack, designed to easily enable zkML integrations on-chain. It's a Python-based toolkit that allows the creation of 'Actions', fundamental units that enable ML functionalities within web3 processes. Simplifying ML's incorporation into web3, the SDK helps developers define and manage 'Tasks' and 'Actions' through straightforward Python functions.

Central to the SDK are 'Models', which deploy ML models as part of an Action for easy and verifiable ML inferences. With the Workspace UI, developers get a comprehensive management tool for monitoring their ML integrations. Actions SDK democratizes ML in web3 by making Zero-Knowledge Machine Learning (ZKML) accessible to AI developers,

bridging the skill gap and fostering innovation in the ecosystem. Giza's initiative with Actions SDK signifies a strategic step towards a seamless and holistic integration of ML in decentralized applications.

The SDK simplifies the integration of machine learning into web3, similarly to a 'keeper' for ML processes. If an input is received, it will require certain conditions to be met to "ignite" various flows. It allows developers to define and manage ML tasks through Python functions, enhancing the creation of 'Actions'—key to enabling ML within web3. Highlighting its capability, the SDK, especially with Orion, offers detailed feedback on inputs, execution times, and outputs, akin to a built-in monitoring system. This feature aids developers in understanding and debugging workflows, reminiscent of CI pipelines in GitHub, ensuring smooth and comprehensive system functionality.

Central to the SDK are 'Models', deploying ML models for verifiable on-chain inferences. The Workspace UI further supports developers with tools for monitoring ML integrations. Giza's Actions SDK marks a significant step towards democratizing Zero-Knowledge Machine Learning (ZKML) for AI developers, facilitating innovation in the ecosystem by making ML more accessible in decentralized applications

AI Actions:

Giza's AI Actions is a pioneering solution designed to harmoniously blend machine learning (ML) with blockchain technology, addressing both technical and educational barriers that have historically separated the two domains. This initiative is born out of a recognition of the need to streamline the integration of ML into the blockchain to cultivate a robust Web3/AI ecosystem. AI Actions is built upon three pillars—enhanced data accessibility and quality, user-friendly model development tools, and seamless integration protocols. These foundational elements are meticulously designed to tackle prevalent challenges such as the dearth of ML expertise in the blockchain sphere, the absence of structured and labeled data, and the complexities surrounding data provenance.

At its core, AI Actions is about democratizing ML within the blockchain landscape, bridging skill gaps and leveraging the extensive pool of AI talent to infuse innovation into decentralized technologies. With a vision to foster a trust-centric and verifiable ML application within blockchain, AI Actions aims to create a collaborative environment where AI developers and blockchain professionals can innovate together. The initiative represents a significant stride towards a future where the power of AI is fully harnessed in the blockchain, setting a new benchmark for advanced, efficient, and trustworthy blockchain ecosystems.

Giza platform (or Protocol)

It integrates a modular stack with Orion to offer verifiable inferences accommodating various ZK backend tech. Orion is an unifying layer that ensures a cohesive user experience regardless of the chosen backend demonstrating flexibility and modularity overall. It means that this approach supports multiple zk backends allowing users to leverage established frameworks through modularity. The giza platform overall stands as the central pillar for

Investment Memo 2

Key Value Proposition

While dark pools are often seen as privacy tools, Silhouette also addresses MEV protection by guaranteeing executions. DeFi’s MEV issue is vast; Flashbots Protect only covers about ~25% of on-chain transactions, leaving room for improvement.

i.e. Dark pools could provide protections for time-weighted orders and vault operations, enhancing ease of execution. Once the EVM launches and lending markets are present, there is also the option of handling liquidations.

Market Approach & Differentiation

Many dark pool projects are built from scratch, facing challenges in liquidity and privacy. Silhouette’s strategy of building atop active venues (e.g., HyperLiquid) offers a more advantageous Go-To-Market (GTM) approach. Competitors have low volume (Renegade & Sunscreen), and are dead / dying. They solved the technical part but didn’t care enough about liquidity / volume, which makes an exchange sustainable. Sunscreen is maybe the most interesting one, still in beta, raising a second round with only minor updates to the previous one. Penumbra is also a competitor that the team thinks focused too much on the technical part and will end up not attracting liquidity nor traders.

We are unsure Silhouette competes with privacy preserving EVM chains, as a dark pool trading venue needs a “vanilla” trading venue for it to be settled on, and Silhouette is an exchange first, not a chain. Building a privacy chain from scratch a) doesn’t serve the same purposes and b) faces obvious liquidity fragmentation issues.

Strong relationships within the HyperLiquid ecosystem and close connections with top traders give Silhouette a distinct GTM advantage. They’ve got a group chat set up with most traders from HL’s top 100. Very close to the Hypurr Collective as well (were kind of “incorporated” by one of their core members, and top H.C. members is going to invest a 250k ticket).

Team

Chandler De Kock (CEO/Co-Founder): Background in crypto business and both centralized and decentralized platforms (Luno, Risk Labs: UMA Protocol & co-founder of Across, L2 bridge).

Stent (CTO/Co-Founder): Cryptography and mathematics. Audit competitions. Built proof-of-reserves for Coinbase w/ Chandler.

First hire: **Tamara** (Mechanism Design Engineer): Formerly with Alkimya (BTC fees market); specialized in block space auctions and MEV.

Planned Hire: A **researcher from Carnegie Mellon** (pending post-fundraising).

GTM & Timeline

Active dialogue with top HyperLiquid traders; building bottom-up based on trader needs.

Important targets are obviously institutional investors. “Preliminary discussions” with BlackRock Markets.

Closed Beta: Planned with top HyperLiquid market makers and traders before the end of 2024.

Public Beta: Expected in Q1 2025.

Long-term Evolution

Performance: Continual optimization of proof generation.

Coverage: Expansion of supported markets and assets.

Investment Narratives

Ecosystem Fit: Aligns with the HyperLiquid ecosystem, privacy requirements (institution-friendly), and MEV resistance.

Success Roadmap

Initial Phase: Proof of concept with HyperLiquid’s top traders to establish dominance.

Expansion: Expand to other chains with active trading venues and sufficient throughput (Monad, MegaETH, Solana? although not evm so harder).

End-goal: Aggregate liquidity across multiple venues for greater market capture.

Deal Summary

Raising \$2-2.5M at a \$20M valuation, with \$700K remaining. This is a pre-seed round.

Potential Leads: Two possible US lead investors in discussions; expected close by November. Declined Dragonfly (not explicitly mentioned but 90% sure, explained a US lead that led another competitor (Sunscreen?) sent them a term sheet that granted them the power to block any future Silhouette fundraising, meaning they could kill Silhouette profiting Sunscreen).

Potential leads conducting Due Diligence are Polychain & True Ventures. Got introduced to Paradigm while in Bangkok.

Future Rounds: Potential Seed round at \$30-50M, depending on pre-seed; Series A contingent on Q1 2025 beta performance. Could do in two rounds if pre-seed is solid enough.

WHY NOW?

- Fintech Market expected to grow significantly in coming years
- Digital assets and blockchain infrastructure moving into institutional adoption
- Early-stage fintech companies had a significant decrease in valuations post 2021, creating rare-timing window where they can be bought at attractive entry prices

TERM SHEET

Company: Vensure Capital Ltd.

1. Offering Terms

- a. Invested Industries: FinTech, Crypto
- b. Stage of Investments: Series A or below - Seed and pre-seed when strategically fully aligned

2. Fund Structure

- a. Type: Venture Capital Fund (close-ended)
- b. Domicile: United Kingdom
- c. Target Geography: UK + Europe
- d. Term: 10 years total
 - i. Investing: 5 years
 - ii. Harvesting: 5+2 years
 - iii. Buffer: 2 Years

3. Investment Parameters

- a. Check Size: £200k - £10m
- b. Ownership Target: 8-20%
- c. Holding Period: 7 years
- d. Follow-on Capital: 40%

4. Fees & Carried Interest

- a. Management Fees: 2% during investment period
- b. Carried Interest: 20% carry on net profits
 - i. hurdle rate: 5%
- c. Distribution 80/20 split

5. Direct Investment Opportunities

- a. The Fund and its General Partner may offer Limited Partners the opportunity to co-invest directly into select portfolio companies (“Directs”).
- b. Directs may be offered at reduced or no management fees, and potentially reduced carry, depending on deal structure.

6. Governance

- a. GP: Vensure Capital represented by Ladislav Bouteloup
- b. LPAC: Current Advisors seen section 8.

7. Fundraising & Closing

- a. Minimum Commitment: £1m - £10m
- b. First Close: Date TBD
- c. Final Close: Typically within 12-18 months of first close
- d. Capital Calls: As needed during investment period, with 10 -15 business days’ notice

8. Confirmed Advisors

- 1. Martin Bruncko
- 2. Andre Bastos Botelhos
- 3. Eng. Hani Abdullah
- 4. Roberto Ono
- 5. Jochen Hense

_____ Vensure Capital - Ladislav Bouteloup	_____ Limited Partners	_____ Limited Partners	_____ Limited Partners
--	---------------------------	---------------------------	---------------------------

Expected Return

Target Net IRR

18-25%

Reflects early-stage risk profile, diversification, and long holding periods.

Target Net TVPI

2.5x - 3.5x

Driven by outlier winners.

Target DPI

1.5x - 2x

In actual cash within 7–10 years. Only counts realised exits with the majority expected from M&A.

Fund Structure

Vensure Capital is organised in a **Limited Partnership Model**

Funds Raised

Until today Venture I has raised £25m.

Expected Fees

Management Fee: 2%

Carried Interest: 20%

RISKS & MITIGATION

Category	Key Observations / Risks Highlighted	Current Risk Likelihood	Recommendations / Actions for Mitigation	Future Risk Impact
Financial	1. Follow-on Funding Risk (Series B/C)	Medium	Maintain capital reserves for follow-ons	Low
	2. Valuation Uncertainty / Overpricing Risk	Medium	Multi-method Valuation Approach (CCA and Scorecard methods)	Medium
Commercial	1. Market Volatility in FinTech & Crypto	High	Disciplined entry pricing and portfolio diversification	Medium
	2. Early-Stage Failure Rate (Seed/Series A)	High	Founder support, portfolio diversification, and Monte Carlo Simulations	High
Operational	1. Weak Founding Teams / Product Market Fit Risk	Medium	Team Due Diligence and active board support	Low
	2. Technology Execution Risk	Medium	CTO-led technical diligence and funding linked to key milestone targets	Low
Regulatory	1. Regulation Changes	Medium	Geographic Diversification, Regtech enabled firms and regulatory sandboxes.	Medium

COMPETITIVE ADVANTAGE

Specialist Focus

Pre-Seed, Seed & Series A FinTech and Digital Asset infrastructure.
Sharper sourcing, underwriting, and founder preference.

Technical & Regulatory Edge

Blockchain, cybersecurity, DeFi, FinTech operations & compliance expertise.
We underwrite complexity generalist funds can't.

Proprietary Deal Flow

First investors in startups that went on to have rounds led/co-led by top US VC funds.

Hands-On Value Creation

100-day plan: compliance roadmap, technical audits, GTM scaling & governance support.

OUR ADVISORS

CEO @ Schuman Finan.
Martin Bruncko

EVP for Europe – Binance

Founder – Steam Capital (deep-tech advisory & VC)

Founder @ Neulogy

Former Head of Europe @ World Economic Forum

Investment Committee @ European Innovation Council Fund

Co-Founder @ AeroMobil

Board Member @ European Stability Mechanism

Government of Slovakia: Innovation & EU affairs

Stanford (BA) • Harvard (MPA)

CEO @ Zeom
Andre Bastos Botelhos

Founder & CRO – Open Co; USD 700mm Series D
Founder & CFO/COO – Rebel; USD 200mm Series B
NYU Stern School of Business: MBA, NYU
Stern MBA Class of 2013

Co-Founder & CEO
Eng. Hani Abdullah

Co-Founder & CEO @Intelligent Solutions Discovery
Entrepreneur/Innovation Champion
Investor/Dealmaker
200 Inspirational Global Leader
Former VP of CORDAP's global funding programs, supporting over \$38M in coral-restoration projects worldwide.

Co-Founder @Murabei
Roberto Ono

Head of Data & Risk – Gnosis Pay (next-gen)
Co-Founder – Murabei Data Science (Nubank credit risk model) fraud prevention & AI/ML)
Expertise – **Big data, AI, credit risk, blockchain analytics**
Universidade de São Paulo (USP) – Physic

Partner @Livingstone
Jochen Hense

Co-founder and shareholder @Livingstone Germany
Experience in **International Transactions**
Partner @InterFinanz
Investment Manager @WestLB Equity Investments
40 years Investment Experience
RWTH Aachen

EXIT STRATEGY

- **Strategic M&A:** can be a valuable exit strategy because Fintechs are highly attractive acquisition targets for banks, insurers and payment companies seeking product expansion or regulatory capabilities.
 - Prospective Companies: Stripe, Revolut
- **Secondary sales:** strong performers can be sold to larger VC or growth equity funds seeking later-stage exposure
 - Prospective Companies: LSEG, HSBC, Octopus Ventures
- **IPO (Initial Public Offering):** may pursue public listing over a longer horizon.

Exit Likelihood by Stage

Stage	M&A	Secondary Sales	IPO
Seed	High	Low	None
Series A	High	Moderate	Rare

FUND LIFECYCLE

Formation & Raising Capital
TODAY - Year 1.5

Fund Formation of Vensure I

Onboarded Panel of Advisors

Raised £25m for Vensure I
Target £100m

Conducting Roadshow
Securing First Close

Investing
Year 1-5

Investing into 10-12 Start-ups, providing hands-on support

Year 4: Double down on successful investments with 40% of raised funds for follow-up rounds

Divestment
Year 5-8

Partial Exit from top-performing companies

Active preparation for Exit

Returning a growing share of capital & profits to investors - continuing to manage remaining holdings

Liquidation & Closure
Year 9-10 (+2)

Distributing funds to investors as remaining holdings are exited

Formal Vensure I closure

Optional extension of up to 2 additional years to manage remaining holdings

Andre Bastos

Thank you!

NEW BUSINESS OPPORTUNITY

Vensure Capital

02 December, 2025

Contact us: Invest@Vensure.com

APPENDIX

1. Market Opportunity

Why Now

First, the long-term demand for new financial infrastructure is indisputable. The FinTech market is projected to grow from nearly 400\$ Billion this year to over \$1.1 Billion by 2032 at a CAGR of roughly 16%. This isn't a cyclical bump; this is a decade-long expansion that we are positioned to ride. (Fortune Business Insights, 2025)

Secondly, digital assets are moving past speculation and into institutional adoption. With \$16 Trillion in illiquid assets expected to be tokenized by 2030 (BCG, 2022). According to a survey done by EY Parthenon and Coinbase, 85% of institutional investors increased their allocations in crypto and other digital assets. We are investing in the core infrastructure for this inevitable shift to global mainstream adoption of digital assets.(Kher and Mickey, 2025)

Finally, for the disciplined investor, the timing couldn't be better. The decreased valuations post 2021 have created a rare timing window to back high-quality, FinTech and digital asset companies at attractive entry prices. We offer improved return potential that simply wasn't available a few years ago. We have the right fund, addressing the right market, at the right time. (Windsor Drake, 2025)

APPENDIX

2, Investment Strategy

Value creation Playbook

- Rapid operational assessment
- Compliance and licensing roadmap (Fintech/crypto requires early alignment)
- GTM & scaling frameworks
- Engineering & security audits

APPENDIX

7. Expected return:

According to a modelling exercise by Industry Ventures: a hypothetical \$100M early-stage VC fund (investing in ~20 companies, most failures, a few 10× winners) could generate a gross 3.8× multiple → net ~3.1× → IRR ≈ 20%. (*Swildens, 2017*)

Historical aggregates from BVCA (UK Private Equity & Venture community) show that funds across vintages deliver since-inception IRRs of ~14–15% p.a., with typical TVPI around ~1.8–1.9×. (*Performance Measurement Survey, 2021*)

More recent data from Carta confirms that smaller funds (or older vintages) tend to outperform larger ones — for instance, 2018-vintage small funds (sub-\$10 M) have had TVPIs above 4× at the 90th percentile, while larger funds show lower multiples. (*Peter Walker, Michael Young, PhD, Kevin Dowd, 2024*)

Also, recent coverage for European-based VCs (via Invest Europe / Cambridge Associates data) finds net IRRs over 10-year horizons around 20 % for European VC overall — noting that early-stage funds inherently have high dispersion (big winners, many failures). (*Woodward, 2024*)

APPENDIX

8. Competitive Advantage

Expertise in Fintech and Digital Asset Infrastructure: Vensure Capital only makes investments in early-stage fintech and digital asset infrastructure (Pre-Seed to Seed/Series A). This covers tokenization markets, on-chain settlement payment rails, embedded finance, and versatile blockchain technology layers. Specialization facilitates more precise underwriting, enhances the sourcing of deals, and is consistent with research indicating that specialized funds are superior in complicated markets than generalist funds.

Extensive Operational, Technical, and Regulatory Knowledge: The group has practical experience in developing financial systems, blockchain engineering, cybersecurity and DeFi, Fintech operations, and compliance. This enables the fund to assess technological viability, security issues, regulatory requirements, and scalability fields, where mainstream investors are unable to take on risks faced, and where most early-stage entrepreneurs need advice.

Integrating Network Access for Exclusive Deal Flow: The fund has access to founders creating superior infrastructure solutions, as Vensure Capital's team has been working inside the industry for a number of years. This includes AI-powered yield optimization systems, institutional liquidity on-chain dark pools, LATAM on-chain neobanks, and controlled tokenization markets.

Investment and Financial Management and due diligence driven by frameworks: Comprehensive scorecards covering commercial, technical, financial, human resource, and regulatory aspects are used by Vensure Capital. This strategy lowers variability, boosts consistency, and enhances the efficiency of decision-making, all of which are in line with developing management techniques as academic and industry research have emphasized (ex. Ramsinghani and Ziesberger).

(100-Day Plan) For a practical Value creation Model: Vensure Capital uses a defined value creation strategy after investments, which includes operational evaluation, a roadmap for licensing and compliance, technological and security evaluation, infrastructures for scaling and GTM, and mechanisms for monitoring and governance. Pre-Seed, Seed/Series A infrastructure businesses frequently face technological and regulatory obstacles, which this operator-investor strategy enables them to overcome.

APPENDIX

Competitor Map:

The competitor map shows how different funds balance two dimensions: technical depth and value-add / hands-on support. Vensure's placement in the top-left quadrant reflects a strategic and intentional positioning relative to other players in the digital-asset and FinTech investment landscape.

Vensure occupies a space representing high value-add and hands-on involvement, combined with moderate technical depth. This is Vensure's core approach which is investing in founders who already possess the deep technical expertise required to build infrastructure-level solutions, and complementing that expertise with operational, commercial and regulatory support.

Vensure's advantage lies in being able to understand, underwrite and evaluate complex technologies, while focusing its efforts on the areas founders typically need support with most, them being structured diligence, compliance and regulatory readiness, go-to-market execution, and post-investment value creation.

APPENDIX

9. Regulation & Compliance

Requirements	Key Action
AIFM Authorized	FCA authorized General partner and compliant under UK AIFMR regulations. (HM Treasury, 2025). We fall under Full-Scope AIFM, as we manage £100 million in assets. We maintain the statutory £50,000 in initial capital for the ongoing fund requirements (HM Treasury, 2025). Our fund conducts annual regulatory status reviews and consults with external counsel regarding compliance.
Depository	We have a FCA-authorized depository and abide by annual compliance reporting with the FCA (Llp, 2025). We will conduct annual depository stress testing to ensure we have operational resilience.
AML/KYC	Customer Due Diligence on all limited partners and Enhance Due diligence on High-risk investors (Legislation, 2025b). We ensure to verify and screen all limited partners. We assess the source of funds and validate limited partners are not a politically exposed person. We conduct continuous rescreening of our existing LPs.
Governance	Our senior management team is properly assessed for fitness. We have a senior management code with a defined statement of purpose with accountability mapping (BVCA, 2025). We have an established governance committee which oversees the actions of the fund.

Operational Resilience	We have mapped impact tolerances of different metrics across the firm as by the guidelines of the FCA (FCA, 2019). We conduct scenario-based testing to model possible disruption scenarios and the impact on the fund. We also have third-party risk reviews.
Tax Disclosure	Compliant with Annual Partnership Tax return (SA800) HMRC (HMRC, 2025). We ensure to have accurate documentation of our actions and activities, with detailed calculations included. We also provide relevant documents for limited partners to fill. We engage with tax advisors to ensure the fund remains HMRC compliant. We also maintain a detailed audit trail of all fund activities.
Data Disclosure & Regulatory Reporting	We abide by the UK GDPR regulations and lawfully process LP data (Legislation, 2025a). We ensure to remain regulatory compliant, with annual fund reports for regulators and investors.

APPENDIX

10. Risks (Regulated Activity, need to inform of all the risks) (Focus on Risk vs Reward)

Category	Key Observations / Risks Highlighted	Current Risk Likelihood	Recommendations / Actions for Mitigation	Future Risk Impact
Financial	1. Follow-on Funding Risk (Series B/C)	Medium	Maintain capital reserves for follow-ons. Ideally between 40-60% for follow on deployment. We will also conduct Monte Carlo simulations to model different capital deployment scenarios. (Mike Palank, 2021).	Low
	2. Valuation Uncertainty / Overpricing Risk	Medium	Multi-method Valuation Approach (CCA and Scorecard methods) (Agarwal et al., 2023). Furthermore, we will stress-test valuation assumptions to validate any valuations we come to.	Medium
Commercial	1. Market Volatility in FinTech & Crypto	High	Disciplined entry pricing, portfolio diversification, and an emphasis on infrastructure rather than hype cycles. We will again use Monte Carlo stress tested models and ensure to maintain a diversified portfolio. We will also focus primarily on unit economics rather than revenue growth metrics (Phoenix Strategy Group, 2025)/	Medium

	2. Early-Stage Failure Rate (Seed/Series A)	High	DD and structured scorecards to evaluate companies. Monte-Carlo Simulations will be deployed to model survival probabilities of startups. We will also conduct an in-depth analysis of the team, as 47% of VCs have found that the team is the most important investment factor with a focus on	High
--	---	------	---	------

			their abilities, industry experience, passion and teamworking ability (Gompers et al., 2020)/	
Operational	1. Weak Founding Teams / PMF Risk	Medium	Team Due Diligence and active board support of the team. We need to conduct due diligence which may incorporate psychological assessments. We will <u>also need need</u> to map founder skills to better understand where they are best suited. We can also link funding to key milestones related to hiring of <u>personal</u> (Sandra Matz, 2024).	Low
	2. Technology Execution Risk	Medium	CTO-led technical diligence which covers coding quality, architecture scalability, stability of platform and compliance infrastructure (Brian Nichols, 2025). We are also able to link funding to hitting certain tech related KPI's to ensure the fintech's prioritize building a good platform to scale the business.	Low
	3. Cybersecurity/ Data Breaches	Medium	In line with industry norms, we will conduct pre-investment cybersecurity due diligence for the companies we invest (QBE, 2025). We will ensure to check internal security assessments, incident reports and possibly ask firms to get cyber insurance. We will mandate implementation of multi factor authentication and data loss prevention to set up technical controls (QBE, 2025).	Medium

Regulatory	1. Regulation Changes	Medium	Maintain geographic diversification across regions to reduce impacts from one specific region. We can also prioritize investments in firms which are RegTech enabled and are able to adapt their compliance frameworks. We can also push our portfolio companies to enter into regulatory sandboxes to test their innovative products (Phoenix Strategy Group, 2025)	Medium
	2. Licensing Risks for Fintechs	Medium	Prior to investment due diligence on regulatory requirements of the firm wi ll be conducted. We will assess the regulatory classification, licensing status, regulatory frameworks they use and the ownership structure of the firm (Miroslav Duric, 2025). Post investment we will work with the firm to roadmap the path to authorization and licensing if they have not reached this step yet. We will also work with the firms to ensure they meet capital requirement regulations to ensure they meet regulator rules (Miroslav Duric, 2025).	High

Q U O T E S

Lad is definitely a positive value add for our cap table. You always appreciate those who are **genuinely interested in the product** and can contribute to its growth through **network expansion**.

Renç Korcay, CEO @ Giza Technologies

Ladislav has been following our startup journey since we first pitched the research & concept to him. After keeping him up-to-date of our progress through 2025, it's great to have an angel beyond capital in our cap-table for the pre-seed. He's **the kind of profile I hope other ventures find** in their early days.

Kasper Karima, CEO @ Tr3e
